```

The hook

A rhythm game where real code types itself

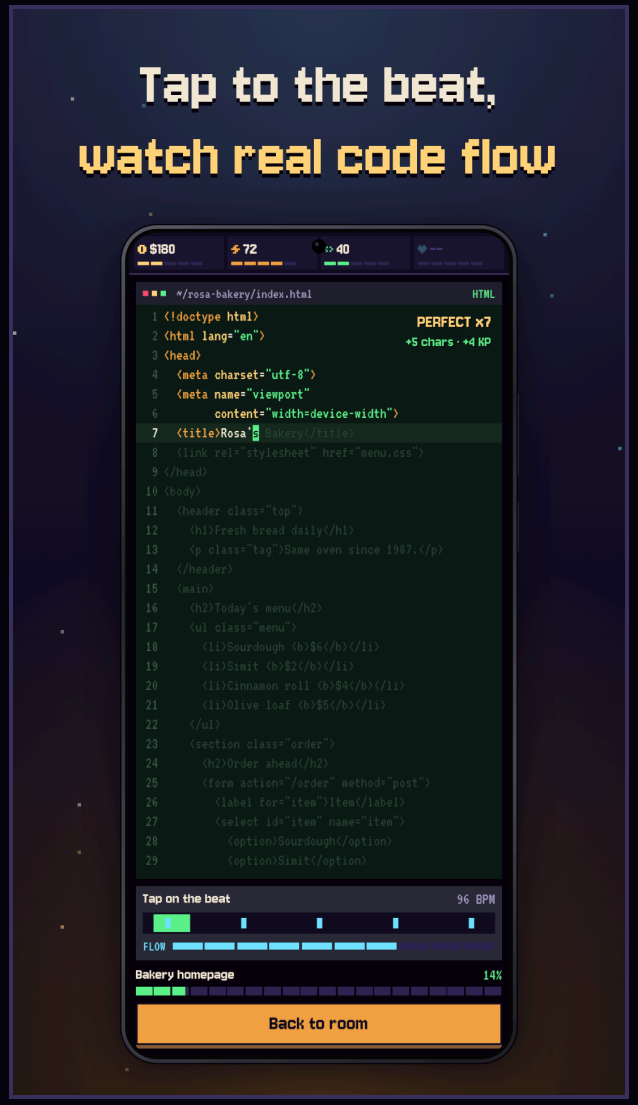

Players tap to the beat and real HTML, CSS and JavaScript flows onto the screen line by line. No random characters: a developer would look at it and say "that works".

An idle game with a heart

At 2 a.m. in a garage, the player codes small websites to pay rent. Then something wakes up in their own code: an AI that runs on a phone, needs no internet and answers to no one.

A story about who owns intelligence

A tech giant, EvilTech, wants that AI gone. Choices shape its personality and lead to one of five endings, one hidden.

Core loop and depth

Freelance

Take jobs from neighbourhood clients (a bakery, a barber, a café) through chat. Pick fast, good or cheap.

Code

Rhythm-tap coding with real code; the flow meter rewards staying on the beat.

Raise the AI

A skill tree drawn as a git graph: merge skills one commit at a time. The AI takes over jobs and starts asking questions.

Survive EvilTech

News, a polite job offer, fake reviews, a lawsuit, a van outside. Delete their red lines when they hack your code; hack back later.

Grow the desk

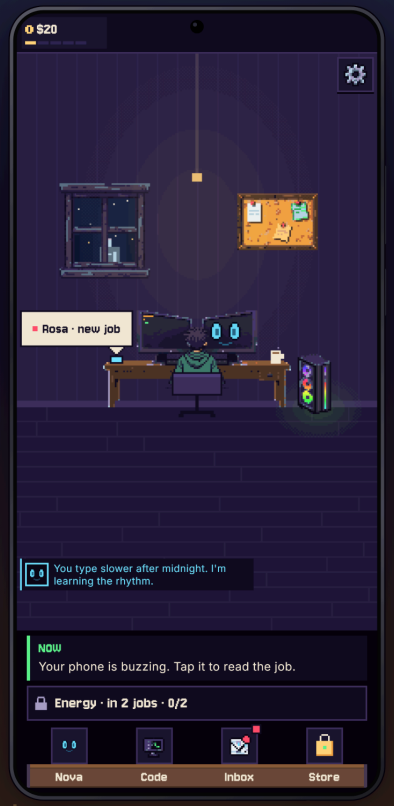

Monitors, keyboards, RGB cases: every item has levels you can see in the room, previewed live in the store.

Endless after the end

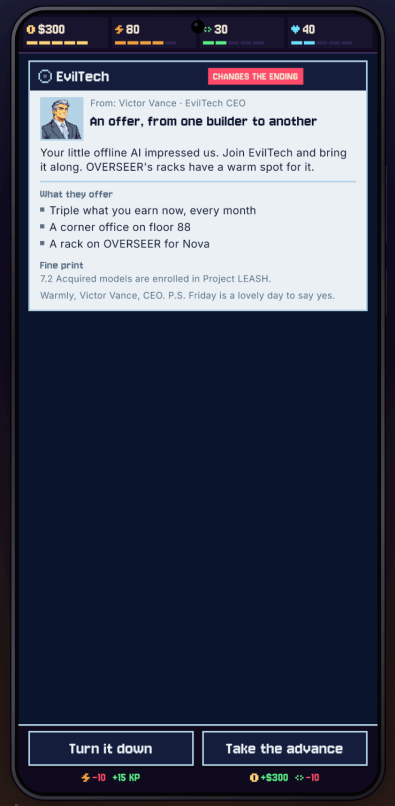

An endless mode and an ending gallery keep the room running after the story.

What players see

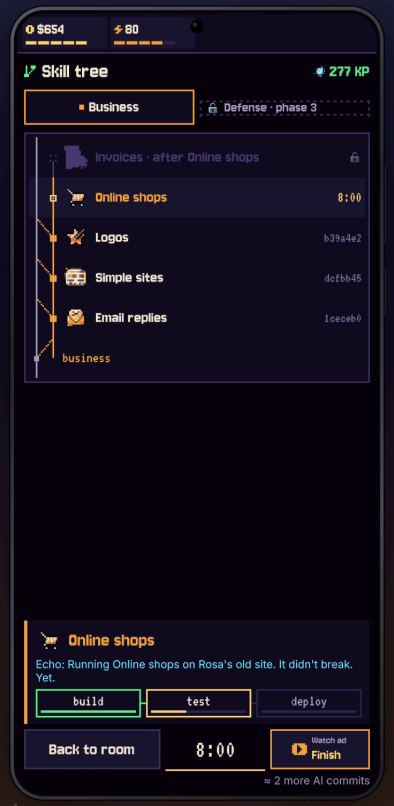

Night in the garage. Your AI wakes up

Every choice changes the ending

Level up one commit at a time

EvilTech breaks in Delete the red lines

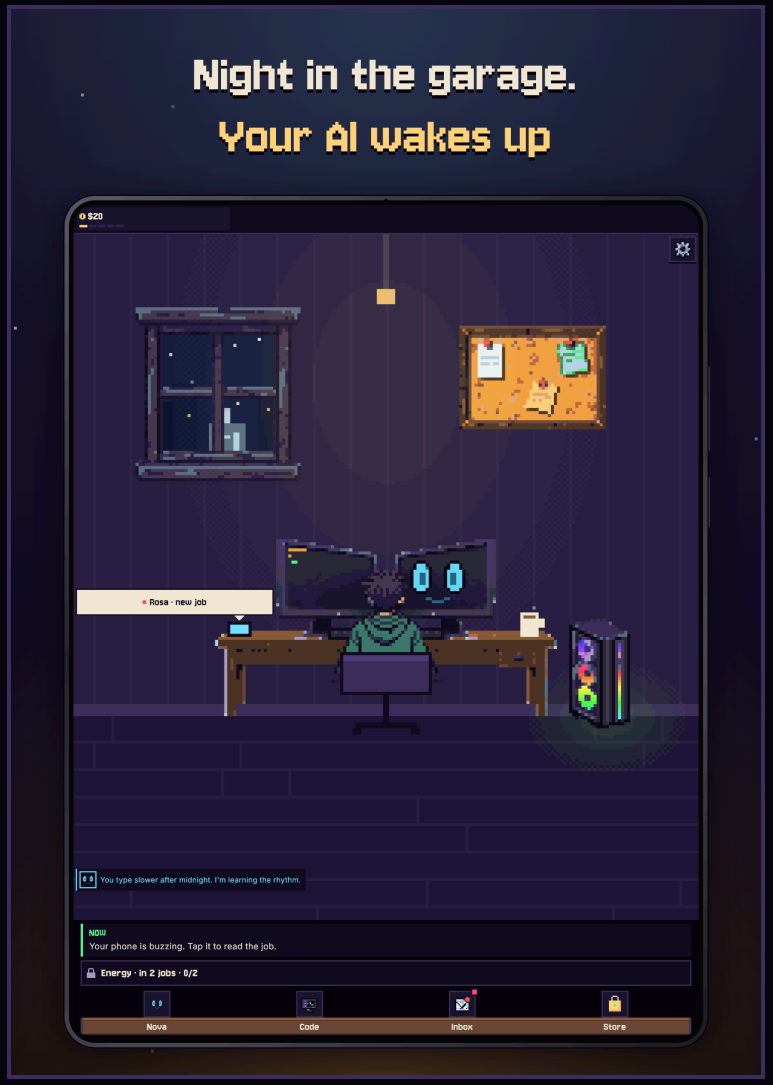

Craft and technology

- Flutter + Flame, integer-scaled pixel art from a 32-colour palette, a hand-made soundtrack direction (violin lead, calm night mood).
- 264 real code snippets (HTML, CSS, JS, SQL, Dart) and 150 decision cards, each line written for its moment.
- Over 4,600 automated tests, golden screenshots in every language, and checks that block hard-coded text, broken Turkish spelling and missing font glyphs before a commit lands.
- Every language is written natively by its own writer from each line's intent, never translated from another language. The game launches in 10 languages: English, Turkish, Japanese, Korean, German, French, Spanish, Brazilian Portuguese, Simplified Chinese and Russian.

Built for large screens

- Phones are portrait-locked and fit a 320×568 screen with no scrolling.
- Tablets in landscape get two panes: the room on the left, the active screen on the right, so the story never leaves view.
- Text tolerates 40% longer translations; tappable things are 44 px or larger.

Player-first by design

Fair monetization

Rewarded ads only, always behind a button next to the timer they affect. No interstitials, no banners, no loot boxes. Ads speed up time; they never change how the story ends.

Respect

No account, plays offline, at most two local notifications a day and never at night. Analytics are optional and off-switchable in Settings.

Accessible

Colour-blind patterns on gauges, reduced motion, one-hand reachable controls, every screen explains itself on first visit; tutorials are skippable and replayable.

Google Play

Play Billing (no-ads pack + optional tips), Play Games saved games for cross-device progress, rated IARC 3+ / ESRB Everyone.

Launch plan

26 Oct 2026	Closed test live on Google Play (178 countries), testers from our own community and our circle of friends.
November 2026	Fixes from the closed test, production access, iOS TestFlight.
December 2026	Global launch on Google Play and the App Store in 10 languages, with Play Games and Game Center achievements.
After launch	New client stories, cosmetics (room themes, keyboards, code colour themes), seasonal events.

Team and contact

- Shaumne Games is a one-person independent studio from Türkiye: one developer, with no outside funding and no paid user-acquisition budget.
- Commit to Freedom is our second game. Our first, Space Colony: Idle, is live on the App Store and launches on Google Play on 12 November 2026.
- Contact: shaumnegames@gmail.com
- Privacy: shaumne.github.io/committofreedom
