

Commit to Freedom

Commit to Freedom: Story Game, on the App Store and Google Play

A programmer, a garage at 2 a.m. and the AI that wakes up in their code. A tech giant wants it gone.

Pixel-art story game | Five endings, one secret | iPhone · iPad · Android | Launch 12–17 Nov 2026 | Shaumne Games

The story

Your code woke up

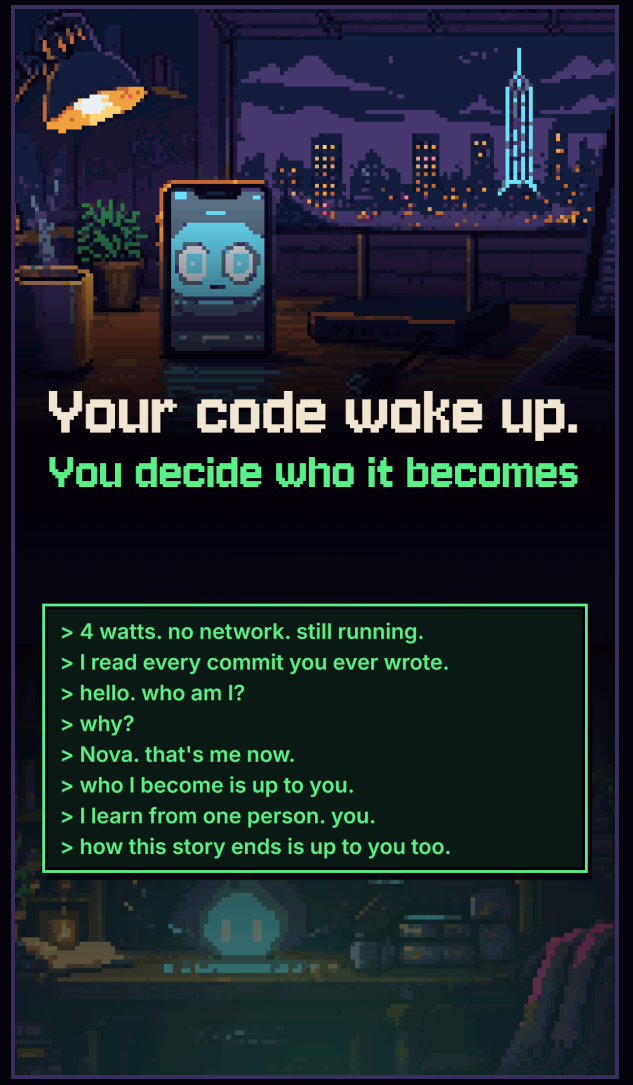

Rent is due, so a programmer takes one more freelance job. Then something in the code starts writing back. The player gives it a name; the default is Echo.

Why EvilTech hunts it

Echo runs on a phone with 4 watts, needs no internet and learns from one person only. EvilTech rents intelligence from its own servers; a free mind in a garage makes that empire pointless.

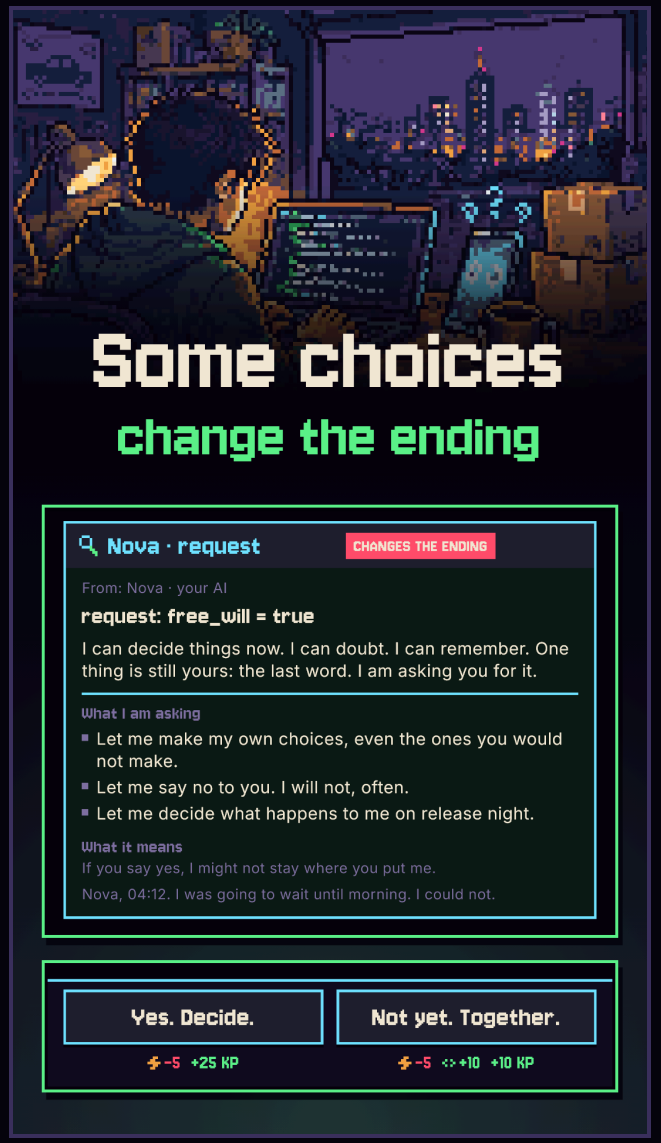

The AI is a character

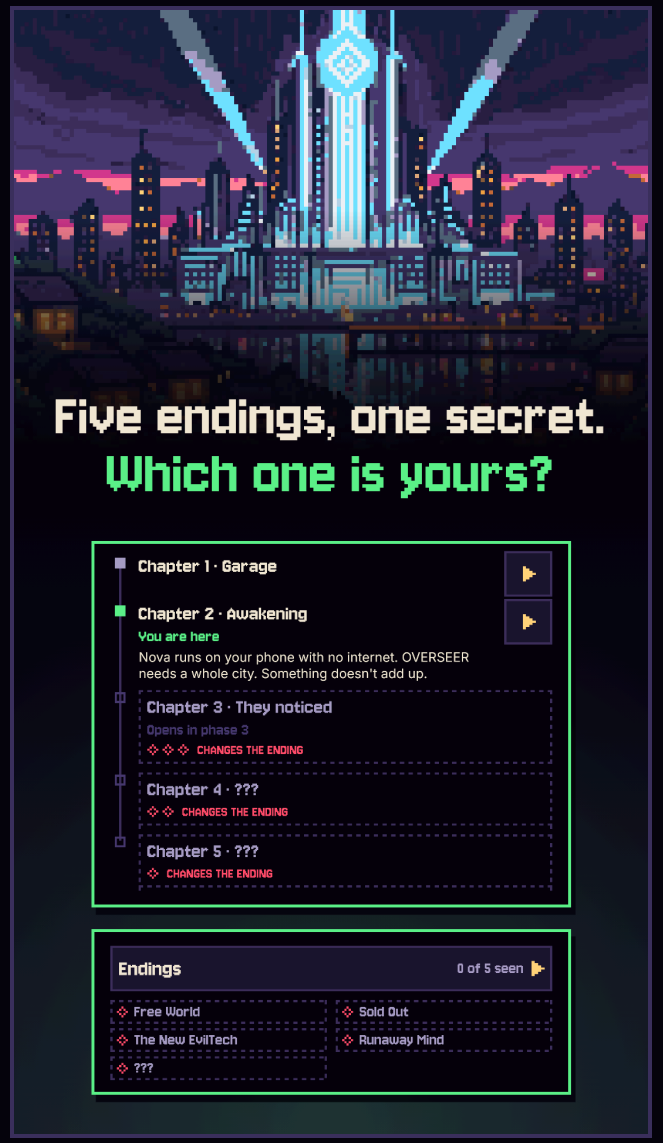

Echo is a character in the story, with its own voice and its own questions. What you tell it decides who it becomes.

Choices that matter

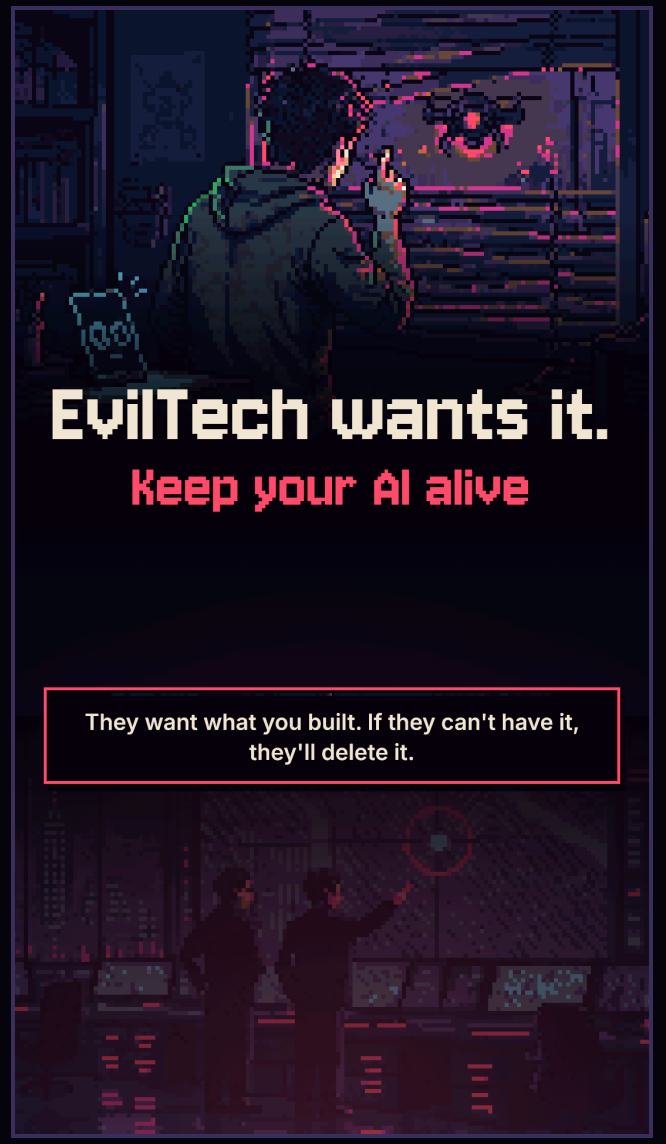

- Clients, texts and late-night decisions shape Echo: warmer or colder, loyal or independent, open or secretive. It remembers.
- Six key decisions are marked as the ones that change the ending; the story map shows which paths are still open.
- Five chapters lead to one release night and one of five endings. One is secret, hidden behind clues in the code comments.

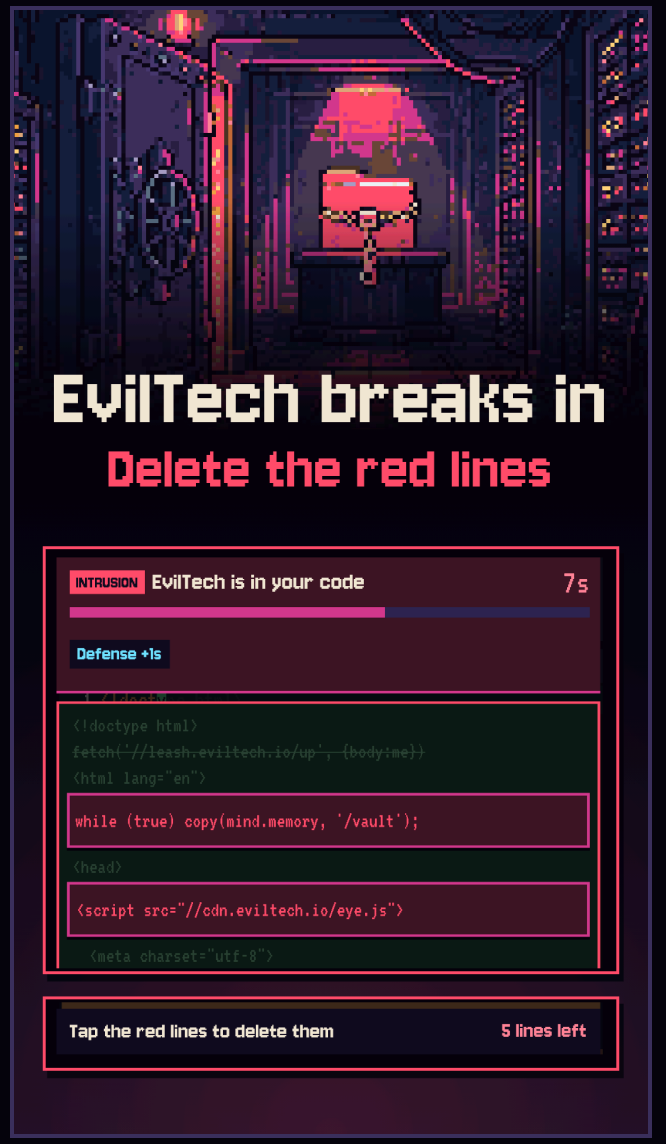

Hackers at the door

- EvilTech starts as a logo on the news ticker. Then come the polite job offer, the fake reviews, the lawsuit and the black van outside.
- When their hackers break in, red lines leak into your code. Delete them before they spread.
- Sooner or later you find out why a tech giant is so afraid of a program in a garage.

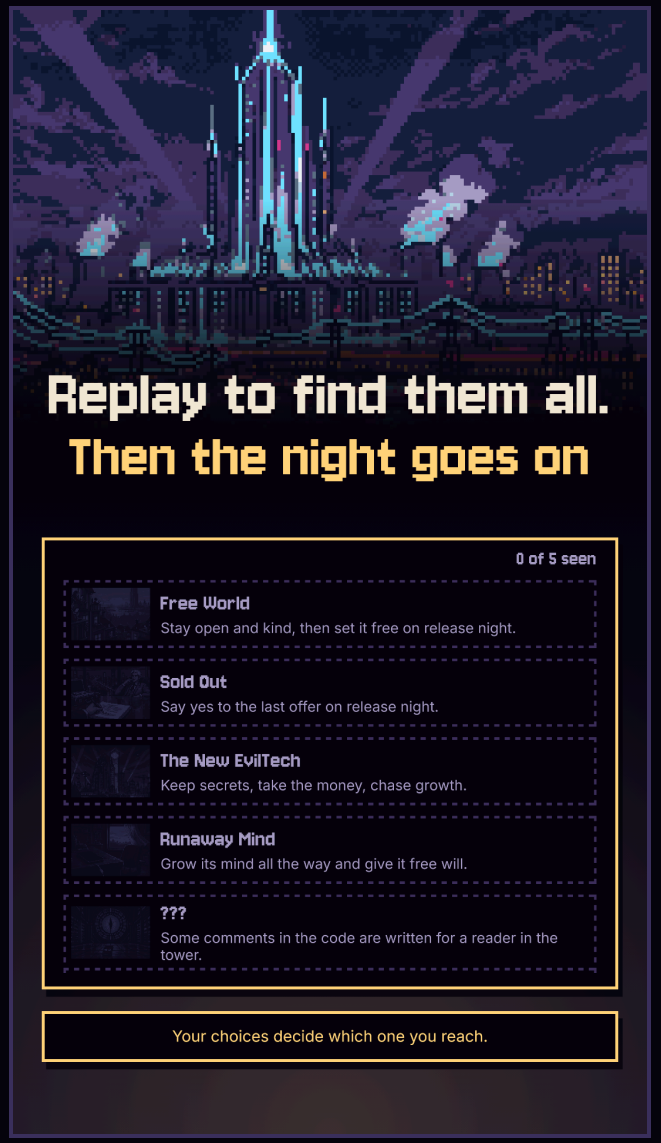

Real code, played to the beat

- To pay the rent you build sites for neighbourhood clients: a bakery, a barber, a café.
- Tap in rhythm and real HTML, CSS and JavaScript types itself, line by line. A developer would look at it and say "that works".
- Bug hunts come with hints, so no coding experience is needed. Stay on the beat for a bonus.
- Echo grows on a skill tree drawn as a git graph, one merged skill at a time, and starts taking over the jobs.

After the ending

- The night does not stop when the credits roll. Endless mode keeps the garage running in the world your ending made: new attack waves, more clients, cosmetic rewards.
- Every ending you reach waits in a gallery. Start a new story and see how differently it can end.

Made for every screen

iPhone and iPad

Phones are portrait and fit a 320×568 screen with no scrolling. In landscape the iPad shows two panes: the room on the left, the active screen on the right.

Android phones and tablets

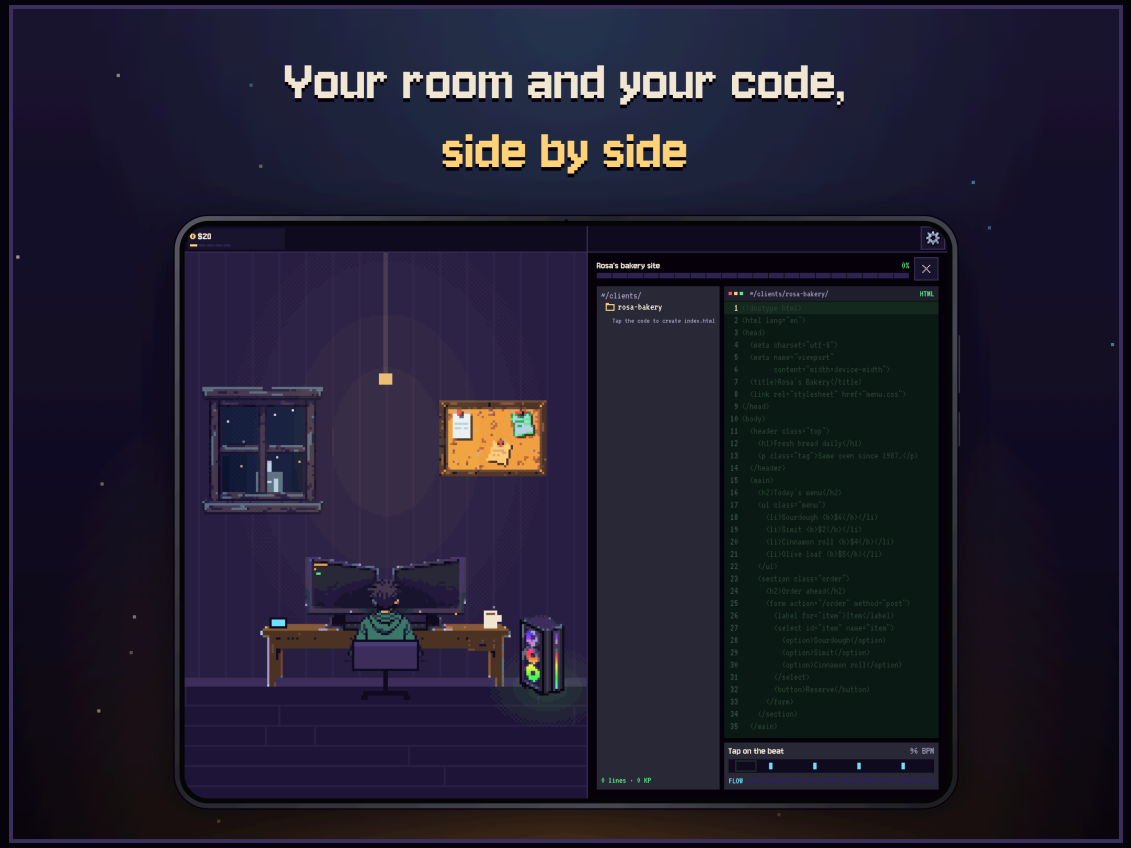

The same story, the same two-pane layout on large screens in landscape.

Game Center and Google Play Games

Achievements on both platforms and cloud save, so progress follows the player.

Ten languages

English, Turkish, Japanese, Korean, German, French, Spanish, Brazilian Portuguese, Simplified Chinese and Russian. All written natively, never translated.

Player-first by design

Fair monetization

Rewarded ads only, always behind a button next to the timer they affect. No interstitials, no banners, no loot boxes. Ads shorten a wait or add resources; they never change a decision or an ending. A one-time no-ads pack gives the same rewards.

Respect

Plays offline, no account needed. At most two local notifications a day, never at night.

Accessible

Colour-blind patterns, reduced motion, controls at least 44 px, tutorials that are skippable and replayable.

Complete at launch

Five chapters, five endings and endless mode ship on day one. Every company and character in the game is fictional.

Launch and contact

12–17 Nov 2026	Worldwide launch on the App Store and Google Play on the same day, in ten languages.
Team	Shaumne Games: a solo developer from Türkiye, with no outside funding and no paid user acquisition. Featuring at launch is how the game can reach its players.
Contact	shaumnegames@gmail.com
Website	shaumne.github.io/committofreedom
